

## Transaxillary, Subfascial Implantation using Silicone Gel Implants Before & After

Condition: Minimal volume, minimal upper pole fullness

Solution: High-profile, smooth round silicone gel implant with concomitant high volume local anesthesia (tumescent)

Benefits:

- No visible scarring
- Minimal operative bleeding
- Fast recovery (able to return to work in 2-4 days)
- Avoidance of implant displacement in the event of capsule formation

Pre-Operative

Post-operative
