

t-TUBA Before & After

Condition: “B-cup” volume, minimal upper pole fullness

Solution: t-TUBA – (transumbilical breast augmentation) belly button insertion of a high profile smooth round saline implant with concomitant high volume local anesthesia (tumescent)

Benefits:

- No scarring
- Minimal operative bleeding
- Fast recovery (able to return to desk job in 1-3 days)
- Minimal chance of capsular contraction
- Lowest rate of complication of all surgical approaches

Pre-operative

Post-operative
